# DOCTORS ABOUT DDW

Drinking deuterium-depleted water (1-2 bottles) reduces the deuterium level in your body from 150 ppm deuterium, to the optimal level of 135 ppm. Deuterium accumulation accelerates aging and favors cancer cell proliferation. Too much deuterium harms your health by altering mitochondrial functions. Deuterium-depleted water helps with low energy, trouble sleeping, and slow metabolic detoxification. The deuterium depletion process also helps with depression and oxidative stress-related health issues. You must drink deuterium-depleted water for at least 2-3 month for noticeable effects.
